SUPPORT AND SERVICE FROM THE PEOPLE WHO KNOW YOUR BARDIANI PRODUCTS BEST.

With the high **demand for safety**, sustainability, and **quality control** in the food and pharmaceutical industries, specialization is essential in ensuring product quality. Bardiani Valvole was founded on this fundamental principle, and it has been realized in hundreds of plants operating in the **dairy, food, beverage** and **pharmaceutical industries**.

Bardiani Valves Canada was established in 2014 to offer greater support for our North American customers.

Built upon the same **spirit of specialization** and **collaboration**, Bardiani Valves Canada focuses on getting your project off the ground by providing unparalleled service at a moment's notice.

B-CARE: SUCCEED TOGETHER

At Bardiani, our **partnership** with our customers **doesn't end after installation**. Rather we support you throughout the life cycle of your plant, to maintain the equipment and continually optimize your process as technology, and your operations, develop. **Bardiani CARE**, a new after-sales approach we are providing for the North American market, does just that. Our program is essential in reducing production losses, maximizing uptime, and maintaining compliance with strict product quality regulations. With a combination of routine on-site service, and remote service professionals, Bardiani has experts available at any time, ready to help even the most urgent of requests. It is this concept which forms the cornerstone of Bardiani CARE.

To achieve the highest reliability and increase your return on investment, Bardiani CARE offers: **Technical Expertise, On-site Training, Preventive Maintenance, Original Spare Parts, Continual Support.**

TECHNICAL EXPERTISE

Using an integrated cloud database, we help you collect all **pertinent technical information** regarding valve installation, including: part numbers, valve locations, installed component identification, component descriptions, custom list of relevant spare parts, and other necessary drawings and information. Our engineers can provide P&ID validation to ensure your process is optimally set-up.

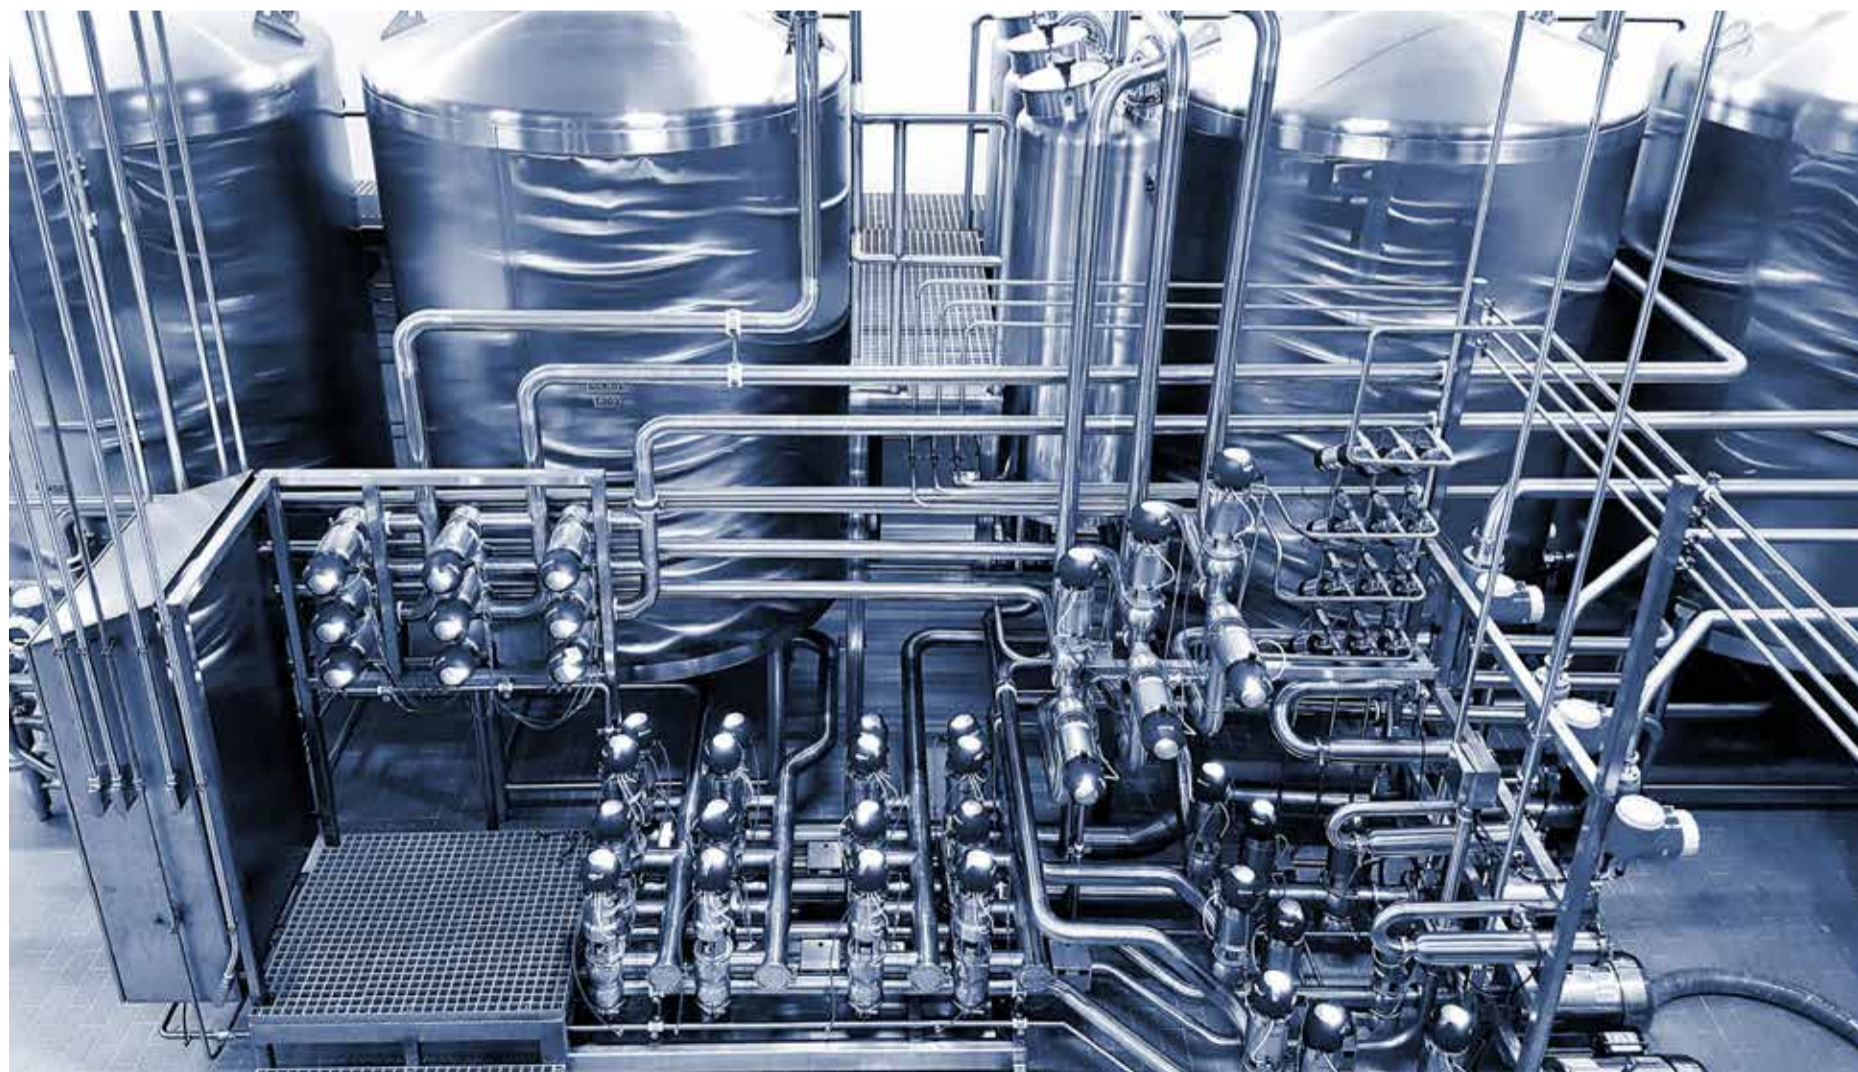

ON-SITE TRAINING

Our experienced technicians will provide hands-on training to ensure that your operators and maintenance staff are familiar with the **disassembly, maintenance, and reassembly procedures** relating to the different valve types. With our provided service kit, your team will have all the tools to perform routine valve maintenance.

PREVENTIVE MAINTENANCE

Our service program guarantees a sustained level of performance from our valves by providing life cycle analyses, **in-person valve maintenance**, wear and tear documentation, refurbishment, and component upgrading. We work with customer-specific production schedules to help reduce downtime of your plant and reduce the need for emergency repairs.

CONTINUAL SUPPORT

Whether it be a new valve being added to your plant, or a modification on an existing valve, **our shared cloud database** ensures that our service team is always up to date with your plant's specifications.

In addition, our trained service professionals are available for periodic visits to execute preventive and corrective maintenance procedures to maximize your plant's operating efficiency.

ORIGINAL SPARE PARTS

We make it easy to obtain the genuine spare parts you are looking for by providing pre-packaged spare kits, **guaranteeing replacement part availability**, and shipping quickly from our local warehouses. We work together with you to determine an appropriate spare replacement plan, and providing services such as monthly gasket supply and other tailored solutions to ensure your plant is always turnkey.

CONTACT US

Have more questions regarding how to join Bardiani CARE for your current or future projects?

Send your inquiry via any of the listed contact methods.
